

Non-connected handwriting

Every person's handwriting is unique, but SoftWriting can recognize any handwriting, as long as the letters are not connected to each other. SoftWriting requires only a brief learning period to learn and remember a new user's handwriting. SoftWriting goes the additional step, learning each user's vocabulary as well, ensuring all means of optimal recognition. SoftWriting works best with upper and lower case block letters.

Use abbreviations

SoftWriting enables users to 'teach' the system abbreviations, which are automatically converted by the system. Thus for example, defining 'ex' as 'example' enables the user to use shorthand writing, with the confidence that the system will recognize the abbreviation and convert it correctly.

Add diagrams

SoftWriting allows sketches and diagrams - as they appear in the users notes - to be transferred to a computer file. The user can then highlight or select the diagram or sketch to easily insert and manipulate the object into the correct area in the computer document.

Save in MS-Word format

The final document can be saved as a text file or MS-Word document.

Use any scanner

In order to scan the handwritten document any scanner can be used, as long as the scanner is TWAIN-compatible.

Easy editing

The portions of text that have not been recognized appear in the same page as the translated document. The user can then easily compare the original to the results, and correct any errors or unrecognized characters on the fly.

Easy to learn & user friendly

The system is easy to learn and simple to use. A four-minute demo is all that is required to get you going.

Pricing & Availability

CharacTell is now available for download at:
www.charactell.com.

A fourteen-day free trial is available. Thereafter, the price is \$59.99
